

Pleasanton Outpatient Center to Open

Posted: Thursday, December 3, 2015 12:00 am

The Tri-Valley community will be able to access a wide range of medical services under one roof in December with the opening of the new Pleasanton Outpatient Center at 5860 Owens Drive in Pleasanton.

This project is the culmination of two years of collaboration between John Muir Health and Tenet Healthcare, which operates San Ramon Regional Medical Center. The Urgent Care will open December 14, 2015. The primary care clinics will open the next day.

The center houses primary care physicians, specialists, an Urgent Care Center, and imaging services.

Patients will be able to access MyJohnMuirHealth.com to view lab results, request prescription refills, or send a message to their doctor

The center is part of the joint venture partnership announced in 2013 between Tenet Healthcare, parent company of the San Ramon Regional Medical Center, a 123-bed acute care hospital in San Ramon, and John Muir Health, a not-for-profit integrated system of doctors, hospitals and other healthcare services in the San Francisco Bay area, based in Walnut Creek, where it operates a 572-bed facility.

San Ramon Regional Medical Center and John Muir Health announced and completed their joint venture partnership in 2013. As part of the agreement, San Ramon Regional Medical Center and John Muir Health will also jointly develop outpatient services, such as the Pleasanton Outpatient Center, and other projects in the Tri-Valley area and nearby communities.
